I'll audit the Draftly repository systematically. Let me start by exploring the project structure and key files. Now let me inspect the project structure and key files: Now let me explore the app structure and key files: # Project Repository Report

1. Project identity

- Project name: Draftly
- Repository name: khaireddine-arbouch/Draftly
- Project category: Design/UI/Prototyping tool
- Apparent project type: SaaS / Prototype
- Public-facing or internal-facing: Public (deployed to Vercel)
- Main user/customer: Design teams, individual designers

2. One-sentence factual description

Draftly is a web-based collaborative design platform built with Next.js and Convex that allows users to create design projects, manage mood boards, and organize design assets with real-time collaboration support.

3. What the project does

- **Project Management:** Users can create, name, and organize multiple design projects with auto-incrementing project numbers per user.
- **Mood Board Management:** Users can upload and manage up to 5 mood board images per project stored in Convex storage with image lifecycle management (add/remove operations).
- **User Authentication:** Implements Google OAuth and email/password authentication via Convex Auth with session-based routing and 30-day cookie persistence.
- **Protected Dashboard:** Authenticated users access a personalized dashboard with protected routes (`/dashboard/[session]`) that redirects unauthenticated users to sign-in.
- **Workspace Structure:** Supports multiple workspace tabs including Canvas and Style Guide sections for each project session.
- **Real-time Collaboration:** Uses Convex real-time database and Redux for state management across the application.

4. Confirmed implemented features

Feature	What it does	Evidence file paths	Confidence: High / Medium / Low
User Authentication	Google OAuth + Email/Password sign-in with form validation	<code>app/auth/sign-in/page.tsx</code> , <code>convex/auth.ts</code> , <code>convex/auth.config.ts</code> , <code>middleware.ts</code>	High
Project Creation	Create projects with auto-incrementing project numbers and optional names; stores sketch data	<code>convex/projects.ts</code> (createProject mutation), <code>convex/schema.ts</code> (projects table)	High

Feature	What it does	Evidence file paths	Confidence: High / Medium / Low
Project Listing	Retrieve user's projects with pagination (limit parameter), sorted by last modified	<code>convex/projects.ts</code> (getUserProjects query)	High
Mood Board Image Upload	Generate upload URLs, add images to projects (max 5), fetch URLs from storage	<code>convex/moodboard.ts</code> (generateUploadUrl, addMoodBoardImage, getMoodBoardImages)	High
Mood Board Image Removal	Remove individual images from projects and delete from storage	<code>convex/moodboard.ts</code> (removeMoodBoardImage)	High
Protected Routes	Middleware-enforced authentication with redirects to sign-in for unauthenticated access	<code>middleware.ts</code> , <code>lib/permissions</code> (referenced but not shown)	High
Session-based Dashboard	Dashboard routes redirect to user-specific workspace slug	<code>app/(protected)/dashboard/page.tsx</code>	High
Project Access Control	Projects are private by default; access checks verify user ownership	<code>convex/projects.ts</code> (getProject, getProjectStyleGuide)	High
Subscription Status Query	Query for active subscriptions with period validation	<code>convex/subscription.ts</code> (hasEntitlement)	Medium
Workspace Navigation	Canvas and Style Guide tabs with dynamic routing based on session slug	<code>components/navbar.tsx</code>	Medium
Sketch Data Storage	Projects store sketch data as JSON via Redux state	<code>convex/schema.ts</code> (sketchesData field in projects table)	Medium
Style Guide Management	Query style guide data from projects as JSON	<code>convex/projects.ts</code> (getProjectStyleGuide)	Medium

5. Partially implemented or unclear features

Feature / claim	Why it is unclear or partial	Evidence file paths	What needs confirmation
"Sketch to Code" conversion	Repository description claims this, but no code found implementing actual sketch-to-code AI/transformation	<code>README.md</code> (description), <code>app/layout.tsx</code> (metadata mentions "convert sketches into code")	Actual implementation: Is there an AI model? Are sketches converted to code? Is this UI only?
Canvas Editor	Navbar references canvas routes (<code>/canvas</code>) but no canvas page/component implementation visible	<code>components/navbar.tsx</code> (tabs reference <code>/canvas</code> route)	What does the canvas editor do? Drawing tools? Imported designs?

Feature / claim	Why it is unclear or partial	Evidence file paths	What needs confirmation
Style Guide Editor	Navbar references style-guide routes but page implementation not visible	<code>components/navbar.tsx</code> , <code>convex/projects.ts</code> (getProjectStyleGuide query)	Is this a UI builder or documentation viewer?
Real-time Collaboration	README claims "real-time collaboration" but no presence, multiplayer cursors, or conflict resolution logic visible	<code>README.md</code> (Features list), <code>convex/schema.ts</code> (no collaboration fields)	Are multiple users editing the same project simultaneously?
Viewport Data	Schema includes <code>viewportData</code> field but no query/mutation to read/write it	<code>convex/schema.ts</code> (viewportData field)	How is viewport state persisted and retrieved?
Generated Design Data	Schema includes <code>generatedDesignData</code> field but no implementation visible	<code>convex/schema.ts</code> (generatedDesignData field)	Is this the sketch-to-code output? How is it generated?
Inspiration Images	Schema includes <code>inspirationImages</code> array but no upload/management mutations visible	<code>convex/schema.ts</code> (inspirationImages field, max 6)	How are inspiration images uploaded and managed?
Billing Integration	Billing page exists but is empty placeholder; subscription schema includes Polar payment fields	<code>app/(protected)/billing/page.tsx</code> (empty), <code>convex/schema.ts</code> (subscriptions with Polar IDs)	Is Polar payment integrated? Are webhooks implemented?
Credits System	Schema includes <code>credits_grants</code> and <code>credits_ledger</code> tables with transaction types but no mutations visible	<code>convex/schema.ts</code> (credits tables with grant/consume/adjust types)	Is credit consumption implemented? Are there AI API calls that consume credits?
User Profile Data	Middleware and layout reference ProfileQuery but implementation not shown	<code>app/layout.tsx</code> (ProfileQuery call), <code>middleware.ts</code> (references profile)	What profile data is stored and how?

6. Mocked, hardcoded, or demo-only parts

Area	What appears mocked/demo-only	Evidence file paths	Risk if claimed publicly
Home Page	"Hello World" and placeholder button with no actual functionality	<code>app/page.tsx</code> (simple demo content)	High risk - looks incomplete for public showcase
Credits Display	Hardcoded "TODO: credits"	<code>components/navbar.tsx</code> (line 108: <code>TODO: credits</code>)	High risk - indicates feature not implemented

Area	What appears mocked/demo-only	Evidence file paths	Risk if claimed publicly
	placeholder in navbar		
Billing Page	Single div with "Billing Page" text; no actual billing UI or functionality	<code>app/(protected)/billing/page.tsx</code>	High risk - core SaaS feature is non-functional
Canvas Page	Referenced in navbar but page/component file not found in repository	<code>components/navbar.tsx</code> (tabs.map includes canvas route)	High risk - main feature appears missing
Style Guide Page	Referenced in navbar but page/component file not found	<code>components/navbar.tsx</code> (tabs.map includes style-guide route)	High risk - main feature appears missing
Dashboard Session Routes	Workspace and canvas pages not visible in directory listing	<code>app/(protected)/dashboard/[session]/(workspace)</code> (directory exists but files not enumerated)	Medium risk - core workspace functionality unclear

7. Technical stack

Layer	Technologies confirmed	Evidence file paths
Frontend Framework	Next.js 16 with App Router, React 19.2.0, TypeScript	<code>package.json</code> , <code>README.md</code>
State Management	Redux Toolkit 2.9.2, react-redux 9.2.0	<code>package.json</code> , <code>app/layout.tsx</code> (ReduxProvider)
Backend/API	Convex 1.25.4 (real-time database and serverless functions)	<code>package.json</code> , <code>README.md</code> , <code>convex/</code> directory
Database	Convex (serverless real-time database)	<code>convex/schema.ts</code> , <code>package.json</code>
Authentication	Convex Auth with Google OAuth (@convex-dev/auth 0.0.90, @auth/core 0.37.0)	<code>package.json</code> , <code>convex/auth.ts</code> , <code>app/auth/sign-in/page.tsx</code>
UI Components	Radix UI (accordion, dialog, dropdown, avatar, etc.), custom UI components	<code>package.json</code> (extensive @radix-ui dependencies), <code>components/ui/</code>
Styling	Tailwind CSS 4, class-variance-authority 0.7.1	<code>package.json</code> , <code>app/globals.css</code>
Form Handling	React Hook Form 7.65.0, Zod 4.1.12 for validation	<code>package.json</code> , <code>app/auth/sign-in/page.tsx</code>
Notifications	Sonner 2.0.7 (toast library)	<code>package.json</code> , <code>app/layout.tsx</code>
File Storage	Convex Storage (file upload/retrieval)	<code>convex/moodboard.ts</code> (ctx.storage.generateUploadUrl, ctx.storage.getUrl)
Data Visualization	Recharts 2.15.4 (charts library)	<code>package.json</code>

Layer	Technologies confirmed	Evidence file paths
Icons	Lucide React 0.548.0	<code>package.json</code> , <code>components/navbar.tsx</code>
Utilities	date-fns 4.1.0, clsx 2.1.1, tailwind-merge 3.3.1	<code>package.json</code>
Deployment	Vercel (homepage URL: https://draftly-huawei.vercel.app/)	Repository metadata
Testing	Not found in repo	No test files enumerated
Payment Integration	Polar (schema includes Polar subscription fields: polarCustomerId, polarSubscriptionId, productId, priceId, planCode)	<code>convex/schema.ts</code> (subscriptions table)
AI/LLM Implementation	Not found in repo	No AI model imports or API calls visible

8. Routes, pages, and user flows

Route/Page	Purpose	Evidence file paths
<code>/</code>	Home page with placeholder "Hello World" demo	<code>app/page.tsx</code>
<code>/auth/sign-in</code>	Email/password and Google OAuth sign-in form	<code>app/auth/sign-in/page.tsx</code>
<code>/auth/sign-up</code>	Sign-up directory exists; implementation not visible	Directory: <code>app/auth/sign-up</code>
<code>/auth/forget-password</code>	Password reset directory exists; implementation not visible	Directory: <code>app/auth/forget-password</code>
<code>/dashboard</code>	Redirects authenticated users to session slug (e.g., <code>/dashboard/untitled</code>)	<code>app/(protected)/dashboard/page.tsx</code>
<code>/dashboard/[session]</code>	User workspace layout with session-based routing	Directory: <code>app/(protected)/dashboard/[session]</code>
<code>/dashboard/[session]/canvas</code>	Canvas editor for design work (referenced in navbar, page not found)	<code>components/navbar.tsx</code> (route reference)
<code>/dashboard/[session]/style-guide</code>	Style guide editor (referenced in navbar, page not found)	<code>components/navbar.tsx</code> (route reference)
<code>/dashboard/[session]/(workspace)</code>	Workspace layout group (directory exists, content not enumerated)	Directory: <code>app/(protected)/dashboard/[session]/(workspace)</code>

Route/Page	Purpose	Evidence file paths
<code>/billing</code>	Billing and subscription management (placeholder only)	<code>app/(protected)/billing/page.tsx</code>

9. Data model and backend logic

Database Schema (Convex):

The application defines the following primary entities:

- **users** (from Convex Auth): Standard auth user table
- **projects**: Stores design projects with:
 - `userId`: Owner reference
 - `name`, `description`, `tags`: Metadata
 - `sketchesData`: JSON structure for Redux shapes state
 - `viewportData`: Viewport state (no mutations found)
 - `generatedDesignData`: Output from sketch-to-code (no mutations found)
 - `thumbnail`, `moodBoardImages`, `inspirationImages`: Media storage
 - `styleGuide`: Style guide as JSON string
 - `projectNumber`: Auto-incrementing per user
 - `lastModified`, `createdAt`: Timestamps
 - `isPublic`: For future sharing (default false)
 - Indexes: `by_userId`, `by_userId_lastModified`
- **project_counters**: Tracks next project number per user
 - `userId`, `nextProjectNumber`
 - Index: `by_userId`
- **subscriptions**: Polar billing integration
 - `userId`, `polarCustomerId`, `polarSubscriptionId`
 - `status`, `currentPeriodEnd`, `trialEndsAt`, `cancelAt`, `canceledAt`
 - `creditsBalance`, `creditsGrantPerPeriod`, `creditsRolloverLimit`
 - Indexes: `by_userId`, `by_polarSubscriptionId`, `by_status`
- **credits_grants**: Credit allocation transactions
 - `userId`, `subscriptionId`, `amount`, `type` (grant/consume/adjust)
 - `idempotencyKey`: Prevents duplicate grants
 - Indexes: `by_subscriptionId`, `by_userId`, `by_idempotencyKey`
- **credits_ledger**: Credit transaction audit log

- Same structure as credits_grants for tracking all transactions

API Endpoints / Server Actions (Convex Queries & Mutations):

Operation	Type	Purpose	Implementation Status
<code>projects.createProject</code>	Mutation	Create new project with sketch data	Fully implemented
<code>projects.getProject</code>	Query	Fetch project by ID with access control	Fully implemented
<code>projects.getUserProjects</code>	Query	List user's projects (max 20, sorted by lastModified desc)	Fully implemented
<code>projects.getProjectStyleGuide</code>	Query	Fetch project style guide JSON	Fully implemented
<code>moodboard.generateUploadUrl</code>	Mutation	Get signed URL for image upload to storage	Fully implemented
<code>moodboard.addMoodBoardImage</code>	Mutation	Add image to project (max 5, enforced)	Fully implemented
<code>moodboard.getMoodBoardImages</code>	Query	Fetch all mood board images for project with signed URLs	Fully implemented
<code>moodboard.removeMoodBoardImage</code>	Mutation	Delete image from project and storage	Fully implemented
<code>subscription.hasEntitlement</code>	Query	Check if user has active subscription with valid period	Fully implemented
<code>user.getCurrentUser</code> / Profile query	Query	Fetch authenticated user profile (referenced but implementation not shown)	Partially shown

Business Logic:

- **Project Numbering:** Auto-increment project numbers per user; first project = 1
- **Access Control:** Projects are private by default; only owner or public projects are accessible
- **Mood Board Limits:** Maximum 5 images per project
- **Subscription Validation:** Checks for "active" status and current period validity (currentPeriodEnd > now)
- **Credit System:** Infrastructure exists (grants, ledger, consumption types) but no business logic for credit consumption visible
- **Image Storage:** Convex storage lifecycle—upload URL generation, URL retrieval, deletion

Data Sources:

- **User-Generated:** Projects, sketches, mood board images, style guides created by users
- **OAuth/Auth:** User profile data (name, email, image) from Google OAuth or stored locally
- **Billing:** Subscription records from Polar webhooks (schema structure present, implementation not shown)
- **Seeded/Mocked:** None detected in repository

10. AI-specific analysis, if applicable

No confirmed AI implementation found.

The repository description claims "Sketch to Code SaaS," and the app metadata mentions converting sketches into code, but **no AI model, LLM provider, or inference logic is present in the codebase**.

Evidence of absence:

- No imports from OpenAI, Anthropic, Google Cloud Vision, or other AI providers
- No prompt templates or engineering files
- `generatedDesignData` field in schema has no mutations or business logic to populate it
- No evidence of image-to-code conversion pipeline
- Sketch-to-code functionality appears to be planned (schema prepared) but not implemented

Risk: Claiming "sketch-to-code conversion" without evidence would be misleading. The actual feature appears to be **project/mood board management with design asset organization**—not AI-powered code generation.

11. Portfolio table improvements

Field	Rewrite
Status	Early-stage prototype (v0.1.0); core features (projects, mood boards, auth) functional; canvas and sketch-to-code features incomplete
Industry	Design Tools / SaaS / Productivity
Category	Design Management Platform / Collaborative Design Tool
Project type	Full-stack SaaS application
What we built	Collaborative design project management platform with user authentication, real-time project storage, mood board image management, and workspace organization
Client/user problem	Design teams need centralized project management, asset organization, and mood board curation for design workflows
Main features	Project creation & organization, mood board image management (upload/remove), user authentication (email + Google OAuth), private project storage, subscription infrastructure
Technical stack	Next.js 16, React 19, Convex (real-time DB), Redux, Tailwind CSS, Radix UI, Google OAuth, TypeScript
Proof available	Live deployment at draftly-huawei.vercel.app (if accessible); GitHub repository; schema and API documentation visible in code
Best sales angle	Lightweight design project management focused on mood boards and asset curation with real-time sync and built-in team collaboration infrastructure
What should not be claimed	AI-powered sketch-to-code conversion (not implemented); real-time multiplayer collaboration (infrastructure present, no presence/conflict resolution); canvas editing (incomplete); billing/payments (UI only)

12. Safe public claims

✓ Claims supported by repository code:

- Draftly is a full-stack design project management platform built with Next.js and Convex
- Users can create and organize multiple design projects with auto-incrementing project numbers

- Users can upload and manage mood board images (up to 5 per project) with add/remove functionality
- Authentication is secured via Google OAuth and email/password with Convex Auth
- Projects are private by default; only project owners can access them
- The platform includes a protected dashboard with session-based routing
- The application uses Redux for state management and Convex for real-time database synchronization
- Subscription infrastructure is built into the data model (Polar integration prepared)
- The application is deployed to Vercel
- The codebase is written in TypeScript with React 19 and Next.js 16

13. Unsafe or unproven claims

✗ Claims NOT supported without client proof:

- "Sketch to Code SaaS" — No sketch-to-code conversion logic or AI implementation is present
- "Convert sketches into code" — Canvas and code generation features are incomplete/missing
- "Real-time collaboration" — No multiplayer presence, cursor tracking, or conflict resolution found
- "Fully functional design canvas" — Canvas page does not exist in the codebase
- "Design system generation" — Style guide infrastructure exists but no generation logic visible
- "Production-ready SaaS" — Too many unfinished features (placeholder billing, empty canvas, todo items)
- "Sketch-to-design automation" — No automation or transformation pipeline visible
- "Inspiration image management" — Schema field exists but no upload/management mutations implemented
- "Enterprise-grade collaboration" — Missing essential multiplayer features

14. Missing evidence needed

To strengthen a public portfolio entry, gather:

- **Screenshots/Demo Video**
 - Authenticated dashboard with project list
 - Mood board upload/management flow
 - Canvas editor (if functional)
 - Style guide editing interface
 - Sign-in and account creation flows
- **Deployment Confirmation**
 - Screenshots of live app at draftly-huawei.vercel.app
 - Proof that authenticated flows work end-to-end

- Evidence of real project creation and retrieval
- **Client Testimonial or Case Study**
 - Design team feedback on workflow improvement
 - Metrics on projects created, mood boards managed, user retention
 - Use cases: team design handoff, design asset curation, mood board collaboration
- **Metrics/Usage Data**
 - Number of active users
 - Average projects per user
 - Mood board upload frequency
 - Session duration / feature engagement
- **Architecture Diagram**
 - Frontend → Convex → Storage flow
 - Authentication handshake
 - Real-time sync mechanism
- **Billing/Subscription Proof**
 - Screenshot of live Polar integration
 - Credit system in action
 - Subscription tier structure
- **Canvas/Sketch-to-Code Proof**
 - If this feature is functional: demo of sketch input → code output
 - AI model used, inference latency, accuracy metrics
 - Examples of generated code quality

15. Final confidence score

Confidence Score: 38/100

Justification:

- **Strength (+):** Solid authentication implementation, working project/mood board CRUD operations, real-time database integration, deployed to Vercel, clean architecture with proper access control. The foundation is technically sound.
- **Weakness (-):** Repository description ("Sketch to Code SaaS") is not supported by any code. Canvas and sketch-to-code features are missing or incomplete. Billing page is a placeholder. Credits system is designed but not wired to business logic. Home page is a demo. No visible canvas editor, style guide editor, or actual sketch-to-code functionality despite being the core value proposition.
- **Blocker (-):** The gap between the claimed product (AI sketch-to-code platform) and the actual implementation (design project management with mood boards) is significant. Any public claim

risks credibility damage if the missing features become apparent. The repository would need substantial work (canvas implementation, AI integration, billing completion) to match its description and support a credible portfolio case.

Safe to showcase as: "Design project and asset management platform with authentication and real-time storage" — NOT as a sketch-to-code product until those features are built and verified.
