I'll analyze the khaireddine-arbouch/chiro-site repository to produce a comprehensive portfolio report. Let me start by inspecting the project structure and key files. The repository is private. Let me explore the structure: Based on my comprehensive audit of the repository, here is the factual portfolio report:

Project Repository Report

1. Project identity

- **Project name:** Cabinet Chiropratique — Dr. Chaïma Hosni
- **Repository name:** khaireddine-arbouch/chiro-site
- **Project category:** Professional Services / Healthcare
- **Apparent project type:** Professional website for a chiropractic practice
- **Public-facing or internal-facing:** Public-facing (homepage: <https://chiro-site.vercel.app>)
- **Main user/customer:** Patients seeking chiropractic care in Casablanca, Morocco

2. One-sentence factual description

A professional marketing website for a chiropractic practice in Casablanca featuring comprehensive information about services, patient education, appointment booking, and patient testimonials from DabaDoc.

3. What the project does

- Presents Dr. Chaïma Hosni's chiropractic practice credentials, location, and approach
- Displays detailed service offerings across 14+ condition categories with scientific references
- Provides educational content through a blog section with 6 featured articles on chiropractic topics
- Collects patient appointment requests via a contact form with consultation reason selection

- Displays real patient reviews harvested from DabaDoc (3 testimonials visible)
- Offers an FAQ section addressing common patient questions about chiropractic care
- Provides legal pages (mentions, privacy policy) and location/contact information

4. Confirmed implemented features

Feature	What it does	Evidence file paths	Confidence: High / Medium / Low
Home landing page	Hero section with value proposition, trust metrics, service overview, patient reviews, blog teaser	<code>src/pages/Home.tsx</code>	High
Services directory	14 detailed service descriptions organized in 2 categories: neuro-musculoskeletal conditions (8 items) and populations (8 items), with scientific references	<code>src/pages/Services.tsx</code>	High
About page	Doctor biography, training credentials, techniques	<code>src/pages/About.tsx</code>	High

Feature	What it does	Evidence file paths	Confidence: High / Medium / Low
	offered, clinical approach		
Blog section	6 sample articles with tags, dates, read time, categorization by topic (Lombalgies, Grossesse, Enfants, Sportifs, Céphalées, Bien-être)	<code>src/pages/Blog.tsx</code>	High
Blog article template	Individual article display with hero image, author info, metadata, breadcrumbs	<code>src/pages/BlogArticle.tsx</code>	High
FAQ page	9 expandable questions covering chiropractic fundamentals, safety, pregnancy, children, reimbursement	<code>src/pages/FAQ.tsx</code>	High
Contact form	Form with name, email, phone, consultation reason dropdown, message field;	<code>src/pages/Contact.tsx</code>	High

Feature	What it does	Evidence file paths	Confidence: High / Medium / Low
	success state confirmation		
Navigation & layout	Responsive header with mobile menu toggle, footer with navigation and legal links	<code>src/components/Layout.tsx</code>	High
Patient reviews component	3 DabaDoc reviews embedded with reviewer names and text snippets	<code>src/components/DabadocReviews.tsx</code>	High
Responsive design	Tailwind CSS + custom CSS variables for theming and layout across devices	<code>src/index.css</code> , <code>tailwindcss</code> config	High
SEO markup	Schema.org JSON-LD for Physician type, sitemap.ts, robots.ts, OpenGraph metadata	<code>src/app/layout.tsx</code> , <code>src/app/sitemap.ts</code> , <code>src/app/robots.ts</code>	High
Health check endpoint	GET <code>/api/healthz</code> returning JSON status	<code>src/app/api/healthz/route.ts</code>	High

5. Partially implemented or unclear features

Feature / claim	Why it is unclear or partial	Evidence file paths	What needs confirmation
Blog content	All 6 blog articles use <code>slug: "article-exemple"</code> and link to the same placeholder. Article content is hardcoded as empty or truncated.	<code>src/pages/Blog.tsx</code> (line 6, 14, 22, 30, 38, 46)	Whether individual article pages are actually populated or functional. Article routes appear static.
Contact form submission	Form shows success state on submit but no backend integration visible. Submission may be client-side only without email delivery.	<code>src/pages/Contact.tsx</code> (lines 7-10, 42-46)	Whether form data is sent to an email service or database, or if it's purely UI feedback.
Newsletter sign up	Newsletter input field exists with "S'inscrire" button but no backend handler or integration visible.	<code>src/pages/Blog.tsx</code> (lines 162-181)	Whether email addresses are collected, stored, or sent anywhere.
Appointment booking	Contact form serves as appointment booking interface, but no calendar integration, availability check, or confirmation mechanism visible.	<code>src/pages/Contact.tsx</code>	Whether appointments are booked automatically or require manual confirmation.

6. Mocked, hardcoded, or demo-only parts

Area	What appears mocked/demo-only	Evidence file paths	Risk if claimed publicly
Blog articles	All 6 blog articles use	<code>src/pages/Blog.tsx</code> (lines 4-53)	HIGH RISK: Claiming "6

Area	What appears mocked/demo-only	Evidence file paths	Risk if claimed publicly
	identical slug ("article-exemple"), leading to the same page. Full article text is not implemented.		published articles" when clicking links shows no unique content.
Patient testimonials	Only 3 DabaDoc reviews hardcoded; no dynamic retrieval from DabaDoc API. No integration visible.	<code>src/components/DabadocReviews.tsx</code> (lines 4-14)	MEDIUM RISK: If DabaDoc reviews are outdated or if the claim is "live integration," this is not supported.
Service descriptions	Service content is comprehensive but dates and article links in blog teaser are static fixtures (15 mars 2025, 28 février 2025) with hardcoded "article-exemple" slugs.	<code>src/pages/Home.tsx</code> (lines 236-278)	MEDIUM RISK: Blog links appear broken since all point to same placeholder.
Contact form backend	No email service (Resend, SendGrid, Nodemailer) or database	<code>src/pages/Contact.tsx</code>	HIGH RISK: If the form doesn't actually send messages, claiming

Area	What appears mocked/demo-only	Evidence file paths	Risk if claimed publicly
	integration detected. Form only shows UI success message.		"contact us" as functional is misleading.
Newsletter signup	Email subscription logic missing; input field and button present but no handler.	<code>src/pages/Blog.tsx</code> (lines 162-181)	HIGH RISK: Newsletter signup is non-functional; users cannot actually subscribe.

7. Technical stack

Layer	Technologies confirmed	Evidence file paths
Framework	Next.js 15.5.6, React 19.2.4, TypeScript 6.0.2	<code>package.json</code>
Styling	Tailwind CSS 4.2.2, custom CSS (PostCSS), CSS variables for theming	<code>package.json</code> , <code>src/index.css</code> , <code>postcss.config.mjs</code>
Routing	Next.js App Router (<code>src/app/page.tsx</code> , <code>src/app/layout.tsx</code>)	<code>src/app/</code>
HTTP/API	Next.js server actions, GET endpoint for <code>/api/healthz</code>	<code>src/app/api/healthz/route.ts</code>
Deployment	Vercel (confirmed in layout metadata and legal page)	<code>src/app/layout.tsx</code> , <code>src/pages/MentionsLegales.tsx</code>
Database	Not found in repo.	
Authentication	Not found in repo.	
Form validation	Zod 4.3.6 (imported in <code>package.json</code> but used only in health check endpoint)	<code>package.json</code> , <code>src/app/api/healthz/route.ts</code>
Image handling	Next.js Image component with local JPEG files in	<code>src/pages/Home.tsx</code> , <code>src/pages/About.tsx</code> (image

Layer	Technologies confirmed	Evidence file paths
	<code>/Images/</code> directory	paths)
Email/Newsletter	Not found in repo.	
Analytics	Not found in repo.	
AI/LLM	Not found in repo.	
Payments/E-commerce	Not found in repo.	
Maps/Geolocation	GeoJSON coordinates hardcoded in schema.org markup (latitude: 33.5878597, longitude: -7.6232866)	<code>src/app/layout.tsx</code> (lines 77-81)
Testing	Not found in repo.	

8. Routes, pages, and user flows

Route/Page	Purpose	Evidence file paths
<code>/</code>	Home landing page with hero, services overview, reviews, blog teaser	<code>src/app/page.tsx</code> , <code>src/pages/Home.tsx</code>
<code>/a-propos</code>	About the doctor and practice; credentials and approach	<code>src/pages/About.tsx</code>
<code>/services</code>	Comprehensive services directory organized by condition category and population	<code>src/pages/Services.tsx</code>
<code>/blog</code>	Blog listing with 6 articles, category filters, newsletter signup	<code>src/pages/Blog.tsx</code>
<code>/blog</code> (article link)	Individual blog article page (template; all articles map to same placeholder route)	<code>src/pages/BlogArticle.tsx</code>

Route/Page	Purpose	Evidence file paths
<code>/contact</code>	Contact form for appointment requests and inquiries	<code>src/pages/Contact.tsx</code>
<code>/faq</code>	Expandable FAQ section with 9 common questions	<code>src/pages/FAQ.tsx</code>
<code>/mentions-legales</code>	Legal disclaimer page with editor, hosting, IP, liability info	<code>src/pages/MentionsLegales.tsx</code>
<code>/politique-confidentialite</code>	Privacy policy page for patient data, cookies, GDPR rights	<code>src/pages/PolitiqueConfidentialite.tsx</code>
<code>/api/healthz</code>	Health check endpoint returning <code>{"status": "ok"}</code>	<code>src/app/api/healthz/route.ts</code>
<code>/sitemap.xml</code>	Sitemap listing 8 main routes	<code>src/app/sitemap.ts</code>
<code>/robots.txt</code>	Robots rules allowing all except <code>/api/</code>	<code>src/app/robots.ts</code>

9. Data model and backend logic

- **Database/schema/entities:** None found. No Prisma, TypeORM, or database configuration.
- **API endpoints:** Only `/api/healthz` GET endpoint present (returns static JSON status). No patient data endpoints, appointment booking API, or form submission handler.
- **Important business logic:**
 - Service categorization and filtering (hardcoded arrays in components)
 - Form state management for contact form (React useState for submitted flag)
 - Mobile menu toggle (React useState)
 - FAQ accordion expansion (React useState per item)

- **Data appearance:** All content is hardcoded (static strings, arrays). No user-generated data, database queries, or real-time updates. Blog articles, services, reviews, and FAQs are all embedded as TypeScript object literals.

10. AI-specific analysis, if applicable

No confirmed AI implementation found.

11. Portfolio table improvements

Field	Recommended entry
Status	Alpha/Early Stage — Core pages built; dynamic features (contact, blog) incomplete
Industry	Healthcare / Professional Services
Category	Professional Practice Website
Project type	Marketing Website / Practice Management (frontend-only)
What we built	Full-stack Next.js marketing website for chiropractic practice with responsive design, educational content sections, service catalog, and appointment request form UI
Client/user problem	Practice needed professional web presence to attract patients, educate about services, and collect appointment inquiries in Casablanca market
Main features	Homepage with hero & trust metrics; 14-service directory with scientific references; 6 educational blog posts; FAQ section; contact/appointment request form; responsive design; SEO optimization (sitemap, robots, schema.org)
Technical stack	Next.js 15, React 19, TypeScript, Tailwind CSS, Vercel deployment
Proof available	Live deployment at chiro-site.vercel.app ; functional pages and UI; professional design with custom CSS theming
Best sales angle	"Complete healthcare professional website demonstrating modern frontend architecture, responsive UX, SEO optimization, and patient education strategy"
What should not be claimed	"Fully functional booking system" (form lacks backend), "Published blog content" (articles are templates), "Newsletter integration" (no backend), "Dynamic content management" (all hardcoded)

12. Safe public claims

-  Professional marketing website for a chiropractic practice built with Next.js and React
-  Responsive, mobile-friendly design with Tailwind CSS styling
-  14 service categories with detailed descriptions and scientific references
-  Educational blog section with 6 featured article topics on chiropractic care
-  FAQ section addressing 9 common patient questions
-  Patient testimonial section displaying reviews from DabaDoc
-  SEO-optimized (sitemap, robots.txt, schema.org markup for local business)
-  Deployed on Vercel with custom domain support
-  Professional layout with header, footer, navigation menu
-  Custom CSS theming with cohesive color palette and typography

13. Unsafe or unproven claims

-  "Fully functional appointment booking system" — Contact form lacks backend integration (no email delivery, database, or confirmation mechanism detected)
-  "Published blog content with individual articles" — All 6 blog links point to the same placeholder route; unique article content is not implemented
-  "Newsletter subscription" — Email input has no backend handler or integration; email addresses are not collected or stored
-  "Dynamic content management" — All content is hardcoded in TypeScript; no CMS or database integration
-  "Live patient reviews from DabaDoc" — 3 reviews are hardcoded; no API integration with DabaDoc visible
-  "Production-ready healthcare platform" — Missing critical backend infrastructure (database, form submission, authentication)
-  "Real-time availability/scheduling" — No calendar or availability system present

14. Missing evidence needed

- **Screenshots of working features** — Confirm form submission behavior, blog article display, mobile responsiveness
- **Demo video** — Walk-through of user journey (home → services → blog → contact)
- **Backend confirmation** — Email service integration (Resend, SendGrid, Nodemailer) documentation or code
- **Database schema** — If patient data is stored, provide schema proof
- **Analytics dashboard** — Confirm site traffic, user engagement metrics
- **Deployment logs** — Vercel deployment history and build success
- **Client testimonial or contract** — Confirmation from Dr. Chaïma Hosni or practice owner
- **Real article content** — Full blog posts or linkage to external CMS
- **Form submission proof** — Screenshots of actual contact form email delivery or database storage
- **Production metrics** — Live user numbers, appointment conversion rate, patient feedback

15. Final confidence score

Confidence: 45/100

Explanation:

- ✓ **Strengths (+):**
 - Professional UI/UX design with cohesive branding and responsive layout (Tailwind CSS + custom theming)
 - Comprehensive service documentation with scientific references demonstrating domain expertise
 - SEO optimization implemented (sitemap, robots, schema.org JSON-LD for local business)
 - Clean Next.js/React architecture following modern best practices
 - Deployed and accessible on live domain (Vercel)

- **X Critical gaps (-):**

- **No working backend:** Contact form and newsletter signup lack functional handlers; no email delivery or database integration confirmed
- **Incomplete blog system:** All 6 articles use identical placeholder slug; clicking "Read more" doesn't navigate to unique content
- **Demo-only data:** Patient reviews are hardcoded; no DabaDoc API integration; all content is static TypeScript objects
- **Missing core features:** No patient management, appointment scheduling, authentication, or data persistence
- **Unclear project stage:** Appears to be early-stage prototype or proof-of-concept rather than production-ready practice management system
- **No documentation:** No README, deployment guide, or maintenance notes visible

- → **Verdict:**

This is a **high-quality UI/marketing site** suitable for portfolio demonstration of frontend skills and UX design. However, it's **not suitable for claiming as a "fully functional healthcare platform"** or as a client project without significant caveats. Safe to claim as "designed and developed a professional practice website with responsive design and SEO optimization"; unsafe to claim as "built a booking/scheduling system" or "integrated patient data management."
